

DIRECTOR, TEST AND EVALUATION

Role Description: Build on existing capability of the Future Submarine Program Office to establish the test and evaluation processes for the Future Submarine that will commence with verification of requirements during design through to operational test and evaluation of the submarines following delivery to the Navy and ongoing assessment of their capability thereafter. This will involve:

- > Building on existing capabilities, leading the implementation of a unified operational analysis capacity that will be used throughout the Future Submarine design process to assess design proposals, and support Commonwealth decisions on the requirements and specification baselines.
- > Coordinating the ongoing development of operational analysis models to support Australia's submarine capability throughout life (including operational test and evaluation on delivery and capability assessments thereafter).
- > Leading the Commonwealth's role in assessing the outcomes of land-based testing of systems by DCNS and LMA.
- > Liaising with appropriate authorities to develop and implement a coherent test plan for the Future Submarine that avoids duplication and support the efficient delivery of assured submarine capability to the Royal Australian Navy.
- > Working with all Future Submarine Program Directors to support the coordination of the key program functions across design, construction, material and supplier base management, preparation for sustainment, test and evaluation, commercial, and program controls.
- > Mentoring members of the Future Submarine Technical Office and the Submarine Group combat system division to further develop capacity to manage Future Submarine test requirements.

Position Location: Adelaide, Australia

Reporting to: Head Future Submarine Program
